COURSE PRESENTATION

A new concept of interactive, dynamic and multidisciplinary of two-and-a-half-day course for musculoskeletal specialist where workshops represent more than 70% of the learning process. Face to face with the best specialists in new diagnostic and therapeutical techniques.

International faculty from different disciplines interact with participants so that they acquire the following skills:

- Recognize the anatomical structures that are essential for diagnostic and therapeutic interventionism in musculoskeletal conditions
- Perform joint and periarticular soft tissue diagnostic techniques such as biopsy or synovial fluid study
- Perform the local techniques for the treatment of musculoskeletal diseases both at the spinal and peripheral levels

EDUCATIONAL OBJECTIVES

- Musculoskeletal anatomy and sonoanatomy
- Ultrasound (US)-guided diagnostic and therapeutical musculoskeletal procedures
- Synovial fluid analysis

The focus will be on the following US-guided procedures

- Joints: wrists, MCPJ, IPJ, elbow, shoulder, ankle, knee, hip, MTPJ, sacroiliac, facets, subtalar joint
- Periarticular: bursas, tendons, entheses, fascias
